EDUCATION

University of Illinois at Urbana-Champaign

Aug. 2025 – May 2029

Dual Degree in Math and Computer Science, Minor in Data Science

Urbana-Champaign, IL

Relevant Coursework: Introduction to CS I Honors (Kotlin), Calculus III, Introduction to CS II, CS 173 Discrete Structures, Introduction to Higher Mathematics Honors, Data Science Discovery

EXPERIENCE

MIT Beaver Works Summer Institute

June 2024 – July 2024

Student Intern

Remote

- Selected for a competitive cybersecurity program focused on applied security, reverse engineering, and network defense.
- Gained hands-on experience with tools including Wireshark for network packet analysis, Ghidra and AFL for reverse engineering and fuzz testing, and OpenStego for steganography and encrypted data embedding.
- Explored vulnerabilities such as cross-site scripting (XSS), phishing schemes, and side-channel attacks using AES leakage functions.
- Investigated IoT security, the role of AI in cybersecurity, and engaged with industry experts including NSA speakers and professional penetration testers.
- Participated in red/blue team simulations and presented research findings to MIT faculty and cybersecurity professionals.

Northwestern Internet of Things

June. 2023 – July 2023

Computer Engineer

Chicago, IL

- Designed and assembled end-to-end IoT devices, integrating hardware, firmware, and cloud connectivity to create functional prototypes.
- Built schematics and programmed Argon microcontrollers in C/C++.
- Implemented communication protocols including Bluetooth Low Energy (BLE), cellular, Wi-Fi, and MQTT for smartphone and cloud connectivity.
- Developed sensor modules (e.g., temperature, motion) with real-time data visualization through custom cloud APIs.
- Served as team lead for five peers in the program's capstone project, fostering collaboration and leveraging each member's unique expertise.
- Gained experience with tools such as Node-RED and Blynk.

LEADERSHIP/ACTIVITIES

Science Engineering Learning Community

Jan 2022 – May 2025

Project Lead and Lab Aid

Glenview, IL

- Oversaw and guided teams through four annual projects, demonstrating consistent leadership and project management skills.
- Diagnosed and resolved technical challenges in student engineering projects, spanning hardware, firmware, and software.

PROJECTS

AI Stock Recommendation Engine | Course Project, Introduction to CS I Honors

Aug 2025 – Dec 2025

- Developed a full-stack AI stock recommendation engine using Next.js, leveraging predictive models to provide personalized suggestions based on user-defined risk profiles and sector filters.
- Validated model performance through rigorous back-testing and evaluation, presenting key results and strategic optimizations to faculty and peers.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, Kotlin

Frameworks: React, Node.js, Next.js, Node-RED, WordPress

Developer Tools: MQTT, Blynk, Arduino IDE, GitHub, VS Code, Xcode, Wireshark, Anaconda, Linux
